

NATALIA CHMUROVA

Product Manager | Product Operations | AI Workflow Automation

natalia.chmurova@icloud.com | LinkedIn | Telegram

SUMMARY

Product Manager with 5+ years across marketplaces, AI-enabled products, Web3, mobile and gaming. I turn user research, product hypotheses and operational complexity into clear strategy, shipped features and faster feedback loops - with strength in product discovery, roadmap execution, cross-functional delivery, product analytics and AI-assisted workflow automation.

SELECTED AI PRODUCT OPS PROJECT

AI Product Ops Workbench - Independent Portfolio Project | Jul 2026

Python | Streamlit | Claude API | n8n | ClickUp | Telegram | Whisper

Live demo | n8n case | Code

- Consolidated AI-assisted delivery workflows into a tool that turns raw meeting transcripts or audio recordings into ClickUp-ready tasks, sprint summaries and bug-triage tables - producing a prioritized 6-task backlog in seconds versus ~1 hour by hand.
- Built an agentic n8n workflow (Claude -> parser -> ClickUp) with confidence scoring and human-in-the-loop: high-confidence tasks are created and assigned to owners identified from spoken names, while doubtful triage/priority calls route to Telegram for one-tap approve/reject.
- Kept a live ClickUp board in sync by reconciling each meeting point against existing tasks, adding context to matches and creating only genuinely new tasks; deterministic idempotency keys made re-runs safe and prevented duplicates.
- Instrumented two eval harnesses measuring extraction precision/recall (LLM-as-judge) and new-vs-update decisions against labeled ground truth; eval-driven iteration surfaced and fixed a real agent miss, while a decision log feeds weekly human review.

EXPERIENCE

Product Manager / Product Operations - Selfwork

AI-powered freelance marketplace, payroll and collaboration platform | Jan 2026 - Jul 2026

- Led product discovery to validate Selfwork's initial ICP: defined research questions, mapped internal and external evidence, analyzed 4 adjacent categories and shaped the agency/SMB contractor-workspace hypothesis.
- Translated strategic research into product direction for the Payroll x Marketplace experience, clarifying entry points across freelancer search, contracts, payouts and compliance, and shaping buyer/seller journeys, public profiles, onboarding flows and the Job Board MVP.
- Partnered with Growth, Design and Engineering to diagnose activation funnel drop-offs and build feedback-to-delivery loops across PostHog, GA, discovery calls, bug intake and post-release regression - growing buyer registration from 2.36% to 7.03% (7.52% all-time high) while improving downstream activation: match list views 0.79% -> 6.77% and chat conversations created 0.79% -> 4.51%.
- Designed AI-assisted product operations workflows that converted meetings, transcripts and technical discussions into decisions, action items, ClickUp-ready tasks, acceptance criteria and QA notes, reducing handoff and reporting lag from hours to minutes.

EXPERIENCE (CONTINUED)

Product Manager / Product & Delivery Manager - Private.inc

Web3 Telegram Mini App, 1M+ users | Sep 2024 - Sep 2025

- Increased sales conversion by 25% by identifying customer journey gaps and shipping monetization improvements based on user interviews, funnel analysis and performance data.
- Built and maintained the product roadmap for a fast-growing Web3 app, using 20+ customer development interviews and product metrics to prioritize retention, referral and gamified task features.
- Improved release cadence from bi-weekly to weekly by redesigning Kanban workflow, task ownership, feedback loops and development planning for a 10+ person product and engineering team.
- Coordinated product, engineering, design and business stakeholders from discovery through launch; managed a parallel stream focused on ASO application optimization.

Project / Delivery Manager - Mraid.io

Playable Ads Development, AdTech and Mobile Gaming | Jan 2021 - Jan 2025

- Managed end-to-end delivery of 8+ concurrent 2D and 3D playable ad projects for international mobile gaming and AdTech clients, owning scope, client communication, QA handoff and launch timelines.
- Built a repeatable client delivery framework for onboarding, briefs, feedback collection, QA coordination and post-launch follow-up, improving delivery predictability and supporting renewals.
- Reduced team turnover by 30% over 18 months by introducing structured 1:1s, clearer workflows, documentation standards and performance feedback.

CORE SKILLS

Product: product discovery, product strategy, hypothesis validation, roadmap execution, backlog prioritization, user stories, PRDs, acceptance criteria, customer development, conversion, retention, monetization, marketplace flows.

Product Ops & Delivery: process design, sprint planning, release management, QA coordination, stakeholder alignment, cross-functional workflows, async documentation, launch readiness.

AI & Automation: Claude / Claude Code, Codex, Perplexity, Cursor, n8n, AI-assisted meeting synthesis, transcript-to-task workflows, task drafting, backlog refinement, sprint reporting, QA/release checklists.

Analytics & Tools: ClickUp, Jira, Trello, Notion, Miro, Fathom, PostHog, Google Analytics, Amplitude, Mixpanel, Slack, Mattermost.

EDUCATION

Belarusian State University - Bachelor of Laws, 2018 - 2022

Languages: English C1, Russian native
