Natalia Chmurova

Product Manager

Bali, Indonesia (UTC+8) | Comfortable working European hours

natalia.chmurova@icloud.com | linkedin.com/in/natalia-chmurova-70157b182 | t.me/n_chmurova

Product Manager with 5+ years in tech: nearly 2 in product roles at an AI freelance marketplace and a 1M-user consumer app, after 4 in delivery management. Connects user research and funnel data with roadmap decisions. Builds AI-assisted workflows for product teams.

Experience

Founder and Creator

Aug 2026 – Present

Independent | AI content studio on Instagram, YouTube Shorts and TikTok

- Run two short-video channels on AI tools in Russian and English like a product: a hypothesis and retention review for every video, and weekly rules that feed the next scripts. **55+ videos and 120K+ views** since August.
- Built the production system with Claude Code: an ffmpeg editing pipeline, an analytics loop and a planning dashboard (PWA, 189 tests). Closed a **first paid brand integration** and launched AI onboarding consulting.

Product Manager

Jan 2026 – Jul 2026

Selfwork | AI-powered freelance marketplace and payroll platform

- Partnered with Growth to diagnose onboarding drop-offs in PostHog and Google Analytics, then scoped and specified authentication and chat fixes. Weekly **buyer registration conversion grew from 2.36% to 7.03%**, and chat creation from 0.79% to 4.51%.
- Resolved conflicting guest-chat and onboarding requirements, specifying how registration preserves conversation context, including edge cases and acceptance criteria.
- Prioritized hypotheses by user value, effort and business goals with Growth and Engineering; managed requirements and release checks with a **14-person cross-functional team**.
- Researched four adjacent markets to define a contractor workspace hypothesis for agencies and SMBs, which shaped buyer and seller journeys and the Job Board MVP.

Product Manager

Sep 2024 – Sep 2025

Private.inc | Web3 Telegram Mini App with 1M+ users

- Used **20+ customer interviews** and competitor research to prioritize gifting and game features. **Purchase conversion increased 25%** after the monetization releases.
- Built and maintained the roadmap and requirements with the Product Owner, aligning Design and Engineering from hypothesis to launch.
- Moved a 10+ person team from **biweekly to weekly releases** through Kanban and clear task ownership.

Project and Delivery Manager

Jan 2021 – Jan 2025

Mraid.io | Playable ads for mobile gaming and AdTech clients

- Managed **8+ concurrent 2D and 3D playable ad projects** for international clients, owning scope, client communication, QA coordination and launch timelines.
- Built a repeatable client delivery process covering briefs, feedback rounds and QA, which made launches more predictable and supported repeat orders.
- Reduced team turnover by **30% over 18 months** through structured 1:1s, clearer workflows and documentation.

Selected AI Project

AI Product Ops Workbench

Jul 2026

Independent portfolio project | Python, Streamlit, Claude API, n8n, ClickUp

- Built a working prototype that turns meeting transcripts into ClickUp tasks, sprint reports and bug triage in **seconds instead of about an hour** by hand, inspired by workflows I ran at Selfwork.
- Added duplicate prevention and one-tap approval in Telegram; built evals for extraction (LLM-as-judge precision and recall) and create-versus-update decisions that caught a real agent miss.
